

Coming Soon to MELBOURNE

Who should get the CMI certification?

Are you looking to get certified to do mold inspections? The most reputable mold certifications in the marketplace come from the American Council of Accredited Certification (ACAC). Join Indoor Sciences to prepare for their Council- certified Microbial Investigator (CMI) designation.

The CMI certification will demonstrate to your clients that you:

- Understand when, where and why mold and bacteria will grow
- Recognize the effects that mold and bacteria may have on health
- Assess indoor environments in a comprehensive manner, rather than just collect samples
- Comprehend how to diagnose microbial problems and write plans for them to be resolved
- Apply an industry standards of care to your work

Ian Cull, PE, CIH - your instructor

After finishing our prep. course, you'll be prepared to take the ACAC certification exam either CMI or CIE - offered at computerized testing centres—in Sydney & Melbourne

Who should get the CIE certification?

Do you work in the field of indoor air quality (IAQ)? The Council- certified Indoor Environmentalist (CIE) is the most popular indoor air quality certification. If you investigate air quality problems such as mold, VOCs, allergens, dampness, poor ventilation and sick building syndrome, the CIE is great certification to substantiate your knowledge and experience.

The CIE certification will demonstrate to your clients that you:

- Excel at diagnosing, resolving and preventing common IAQ problems
- Understand how a building's HVAC system can control (and cause) IAQ problems
- Incorporate the full spectrum of contaminants into your IAQ assessments, which may include mold, bacteria, VOCs, carbon monoxide, radon, triggers to asthma & allergies and more
- Apply current industry guidelines
- Comprehend the fundamentals of building science
- Use IAQ instruments and equipment to measure contaminants

The certification is designed for environmental consultants, HVAC professionals, property inspectors, industrial hygienists, restoration contractors and others working in fields related to indoor air quality.

Our face-to-face, on-site courses are condensed down into two 8 hour days for a fast-paced format.

The following are **upcoming class dates**:

CMI 22-23 October, 2018
